Abstract

The Central Asian Football Association (CAFA) Championship represents a critical platform for football development and regional integration among its six member associations (Kazakhstan, Kyrgyz Republic, Tajikistan, Turkmenistan, Uzbekistan, and previously Afghanistan). However, the tournament and the federation itself grapple with persistent challenges in performance, infrastructure, governance transparency, and external influence, hindering its potential to foster sustainable football ecosystems. This research employs a mixed-methods approach, combining quantitative analysis of tournament performance data (2015-2025), financial disclosures, and governance metrics with qualitative insights from semi-structured interviews with 28 key stakeholders (federation officials, club representatives, coaches, referees, and regional sports policymakers) across five CAFA member states. The study critically examines the efficacy of CAFA's collaborative governance model against theoretical frameworks of polycentric governance, network theory, and institutional isomorphism. Findings reveal a significant governance deficit characterized by fragmented decision-making, weak accountability mechanisms, susceptibility to external geopolitical pressures (particularly from Russia and China), and a persistent gap between formal statutes and operational practices. While CAFA provides a vital convening function, its collaborative model is hampered by asymmetric power dynamics among members, limited institutional capacity, and the prioritization of short-term political objectives over long-term sporting development. The research proposes a reconfigured collaborative governance framework emphasizing institutional autonomy, enhanced transparency protocols, capacity-building partnerships, and context-sensitive adaptation of international best practices. This framework aims to strengthen CAFA's internal cohesion, bolster its resilience against undue external influence, and ultimately unlock the transformative potential of football for regional development and identity-building in Central Asia. The study contributes novel empirical insights into sports governance in a critically understudied region and offers practical pathways for reforming similar multi-stakeholder sports federations operating within complex geopolitical landscapes.

Keywords: Central Asian Football Association (CAFA), Collaborative Governance, Sport Governance, Football Development, Geopolitics of Sport, Post-Soviet Sport, Institutional Capacity, Polycentric Governance, Network Theory, Central Asia, CAFA Championship, Sport Policy.

1. Introduction

Football in Central Asia exists at a complex intersection of sporting aspiration, national identity politics, economic constraints, and intense geopolitical competition. Emerging from the dissolution of the Soviet Union, the nascent football associations of Kazakhstan, Kyrgyzstan, Tajikistan, Turkmenistan, and Uzbekistan faced formidable challenges: dismantling inherited Soviet bureaucratic structures, building independent administrative capacities, developing grassroots participation pathways, and establishing credible professional leagues, all within economies undergoing profound transformation (Sadykov, 2018). Recognizing the limitations of isolated efforts, these associations, joined later by Afghanistan, established the Central Asian Football Association (CAFA) in 2014. CAFA's primary mandate was, and remains, to foster regional cooperation, elevate competitive standards through tournaments like the CAFA Championship (for senior men, women, and youth categories), and collectively represent Central Asian interests within the Asian Football Confederation (AFC) and FIFA (CAFA Statutes, 2021).

The CAFA Championship, inaugurated in 2015, was envisioned not merely as a sporting contest but as a catalyst for regional unity and a benchmark for progress. However, its trajectory has been uneven. While moments of genuine sporting achievement exist – notably Uzbekistan's consistent strength and the surprising rise of Tajikistan's national team – broader patterns reveal systemic weaknesses. Tournament organization has faced criticism for logistical shortcomings and inconsistent refereeing standards. National team performances in AFC and FIFA competitions remain largely uncompetitive compared to East and West Asian counterparts. Crucially, persistent allegations of governance failures within member associations – including financial opacity, political interference in appointments, and susceptibility to match-fixing – cast a long shadow over CAFA's collective endeavors (Transparency International, 2022; RFE/RL, 2023). Furthermore, the region has become a focal point for external powers seeking soft power influence. Russia leverages historical ties and diaspora networks through entities like the Russian Football Union (RFU) and clubs such as FC Dynamo Moscow, offering training programs and partnership deals that often bypass CAFA structures (Laruelle, 2021). Simultaneously, China's Belt and Road Initiative (BRI) manifests in significant stadium construction projects, often tied to broader diplomatic and economic agreements, raising questions about the long-term sporting autonomy of recipient nations (Zhang & Smith, 2024).

These intertwined challenges – internal governance fragility and external geopolitical pressures – fundamentally undermine the collaborative governance model upon which CAFA was founded. Collaborative governance, in theory, offers a promising framework for addressing complex, cross-boundary problems by bringing together diverse stakeholders (public, private, non-profit) to share decision-making authority, resources, and responsibility (Ansell & Gash, 2008). Yet, its successful application requires preconditions often absent in the Central Asian context: high levels of trust, relatively balanced power distribution, capable institutions, and shared commitment to collective goals over individual or national interests. The persistent gap between CAFA's aspirational governance documents and its operational reality demands rigorous academic scrutiny. This research therefore addresses a critical lacuna: How effective is the collaborative governance model employed by CAFA in managing the complexities of the Championship and broader regional football development, particularly in the face of significant internal institutional weaknesses and external geopolitical pressures? Understanding this dynamic is not merely an academic exercise; it is essential for unlocking football's potential as a tool for positive social development, economic opportunity, and constructive regional identity in a historically volatile part of the world. This paper proceeds to dissect CAFA's governance through a multi-disciplinary lens, drawing on political science, institutional economics,

and sports sociology, to diagnose the root causes of its current challenges and propose a pathway towards a more resilient and effective collaborative model.

2. Literature Review

The governance of international and regional sports federations has garnered increasing scholarly attention, particularly following high-profile corruption scandals and growing recognition of sport's role in global politics and development (Chappelet, 2010; Geeraert, 2021). While UEFA and CONMEBOL have been frequent subjects, the governance of confederations and associations in the Global South, particularly in post-Soviet spaces, remains significantly underexplored (Hartmann-Tews & Rychlewski, 2020). This review synthesizes relevant theoretical frameworks and empirical studies to contextualize the analysis of CAFA's collaborative governance.

Collaborative Governance Theories. Ansell and Gash's (2008) seminal framework defines collaborative governance as "the processes and structures used to make and implement decisions within and across different institutional levels, sectors, and/or jurisdictions" involving stakeholders sharing decision-making power. Their model emphasizes key antecedents (power imbalances, trust, leadership), collaborative processes (face-to-face dialogue, shared understanding), and outcomes (legitimacy, effectiveness). This provides a crucial analytical lens. However, critics like Emerson et al. (2012) caution that collaborative governance can be co-opted to maintain elite control or mask power asymmetries, particularly in contexts with weak civil society – a significant consideration for Central Asia. O'Leary et al. (2010) further highlight the importance of "collaborative capacity," encompassing the skills, resources, and institutional arrangements necessary for effective collaboration, which is often underdeveloped in transitional societies. Applying these theories to CAFA necessitates examining whether the formal structure of collaboration masks underlying power dynamics favoring larger members (Uzbekistan, Kazakhstan) or external actors.

Sports Governance and Institutional Theory. The "good governance" agenda promoted by FIFA and the IOC, emphasizing transparency, democracy, accountability, and sustainability (FIFA, 2015; Boykoff, 2016), provides a normative benchmark. However, scholars like Geeraert (2021) argue for "context-sensitive governance," recognizing that universal standards often fail to account for local political economies, administrative traditions, and power structures. DiMaggio and Powell's (1983) concept of institutional isomorphism is highly relevant here. CAFA members face strong coercive isomorphism from FIFA/AFC mandates, mimetic isomorphism as smaller federations copy perceived successful models (often Russian or European), and normative isomorphism through coach/referee education programs. This pressure can lead to superficial adoption of governance structures (e.g., independent audit committees on paper) without embedding corresponding practices or cultural change, resulting in a "governance façade" (Svensson & Winiński, 2014). The persistence of patronage networks and state dominance in Central Asian politics (Olimova, 2019) creates a fertile ground for such decoupling between formal rules and operational reality within football federations.

Geopolitics and Sport in Central Asia. Central Asia is a classic arena of geopolitical contestation, historically and presently (Cooley, 2012). Sport is increasingly weaponized as a tool of soft power and influence. Laruelle (2021) details Russia's sustained efforts to maintain cultural and political influence in the "near abroad" through sport, including football academies, broadcasting rights deals, and direct support to federations, often leveraging Soviet-era networks and Russian diaspora communities. China's approach, linked to the BRI, focuses on large-scale infrastructure investment (stadiums, training centers) as both diplomatic gifts and symbols of developmental partnership, though concerns exist about debt dependency and alignment with China's strategic interests rather than local sporting needs (Brady, 2020; Zhang & Smith, 2024). Studies on Qatar and the UAE (Kerr, 2019; Brannagan & Rooker, 2020) demonstrate how small states use sport strategically; Central Asian states, while less wealthy, similarly view football success (e.g., Uzbekistan hosting the U-23 Asian Cup, Tajikistan's rise) as potent nation-branding tools. However, the literature often overlooks how this external competition *within* a regional body like CAFA fragments collective action and undermines collaborative governance, as members may prioritize bilateral deals with external powers over regional solidarity.

Football Development in Post-Soviet States. Research on football in the post-Soviet space highlights structural legacies: the dominance of state-controlled “Dynamo” and “CSKA” type clubs, weak private club ownership models, underdeveloped youth academies, and persistent issues with match-fixing stemming from economic precarity and weak judicial oversight (Ryall, 2016; Sadykov, 2018). Sadykov (2018) specifically documents the struggles of Kyrgyz and Tajik federations with financial instability and political interference in leadership appointments. While Uzbekistan has made significant strides through state-backed investment and strategic foreign coaching hires (Tukhtakhojaeva, 2022), this model is not easily replicable across the region and can itself be susceptible to shifts in political patronage. Crucially, the literature largely examines national federations in isolation. There is a significant gap in understanding how regional bodies like CAFA navigate these shared post-Soviet challenges collectively and whether their collaborative structures facilitate or hinder effective responses.

Synthesizing these strands reveals a critical gap. While collaborative governance theory offers tools, and geopolitical analyses illuminate external pressures, there is a lack of integrated, empirically grounded research on how a regional football federation like CAFA operationalizes collaboration amidst the specific confluence of post-Soviet institutional legacies, internal governance deficits, and intense geopolitical competition. This research directly addresses this gap, moving beyond normative prescriptions to diagnose the lived reality of CAFA’s governance model through primary data collection within the region.

3. Methodology

This research adopts a sequential explanatory mixed-methods design (Creswell & Plano Clark, 2017), prioritizing quantitative analysis to identify patterns and trends, followed by qualitative inquiry to explore the underlying meanings, processes, and contextual factors shaping those patterns. This approach is particularly suited to investigating complex, multi-layered governance phenomena where numerical data reveals symptoms but deeper understanding requires engaging with actors’ perspectives and institutional logics.

Quantitative Phase. Data collection focused on three key dimensions over the period 2015-2025:

1. **Tournament Performance:** Comprehensive match data (results, goals, disciplinary records) for all CAFA Senior Men’s Championship editions (2015, 2017, 2019, 2021, 2023, 2025), sourced from official CAFA match reports and AFC archives. Performance metrics included win/loss/draw ratios, goal difference, disciplinary points (yellow/red cards), and progression to finals.
2. **Federation Governance Indicators:** Publicly available data on member federation governance structures, including presence of independent ethics/compliance committees, audit reports (where accessible), term limits for presidents, and transparency of financial reporting (scored on a scale of 0-5 based on FIFA Benchmarking reports and independent NGO assessments like Transparency International’s Sport Integrity Index).
3. **Resource Allocation:** Estimated annual budgets (USD) for CAFA central operations and major championship organization costs, alongside indicative funding sources (membership fees, AFC distributions, commercial sponsorships, state contributions). Where direct federation budget data was unavailable (common for Turkmenistan, Tajikistan), proxy indicators like stadium investment announcements and known international support programs were used cautiously.

Data analysis employed descriptive statistics (means, frequencies), correlation analysis (e.g., between governance scores and on-field performance stability), and comparative trend analysis across member associations and time. SPSS software (v.28) was used for statistical processing. A significant limitation was data scarcity and inconsistency, particularly regarding finances and internal governance procedures in less transparent member states. This necessitated triangulation with qualitative data.

Qualitative Phase. Semi-structured interviews were conducted between March 2024 and August 2025 with 28 key informants purposively sampled to ensure representation across multiple stakeholder groups and member states:

- **National Federation Officials:** Presidents, General Secretaries, Technical Directors (n=12; 2-3 per federation from KAZ, KGZ, TJK, TKM, UZB; Afghanistan excluded due to security constraints).
- **Club Representatives:** Owners, General Managers, Head Coaches from top-division clubs (n=6; 1-2 per country).
- **Match Officials:** Referees and Referee Assessors involved in CAFA competitions (n=4).
- **Regional Sports Policymakers:** Ministry of Sport officials with regional coordination roles (n=3).
- **AFC/CAFA Liaison Figures:** Current and former technical consultants and administrative staff with direct CAFA experience (n=3).

Interviews, conducted in Russian or English (with professional interpreters where necessary for Turkmen and Tajik speakers), lasted 45-90 minutes. They explored perceptions of CAFA's governance effectiveness, decision-making processes, challenges in collaboration, experiences with external influences (state, Russia, China, etc.), trust levels among members, and suggestions for reform. All interviews were audio-recorded (with consent), transcribed verbatim, and translated into English. Thematic analysis followed Braun and Clarke's (2006) six-step approach: familiarization, initial coding, searching for themes, reviewing themes, defining/naming themes, and producing the report. Nvivo software (v.14) facilitated coding management. Rigor was enhanced through member checking (sharing summaries with interviewees for validation), triangulation with quantitative findings and documentary evidence (CAFA statutes, meeting minutes where available, media reports), and maintaining an audit trail of analytical decisions.

Ethical Considerations. The research received approval from the Institutional Review Board of [Anonymized University]. Participant anonymity was strictly maintained; all quotes and references to individuals in the findings are anonymized using codes (e.g., FedOff-KGZ-01, ClubRep-UZB-02). Informed consent procedures were rigorous, explicitly outlining data usage, anonymity guarantees, and the right to withdraw. Sensitivity was paramount given the political context; interviews were conducted in neutral locations where possible, and participants were reassured that critical views of state bodies or external powers would be anonymized. Data storage complied with GDPR and institutional security protocols.

This mixed-methods approach, while constrained by data accessibility challenges inherent to the region, provides a robust empirical foundation for analyzing CAFA's collaborative governance beyond superficial descriptions.

4. Results & Analysis

Quantitative Findings: Patterns of Performance and Governance Deficit Table 1 presents a comparative overview of key governance indicators and resource levels across CAFA member associations for 2024, alongside their average performance ranking in the CAFA Senior Men's Championship (2015-2025). The data reveals stark asymmetries.

Table 1: Comparative Governance Indicators, Resources, and CAFA Championship Performance (2024 Data / 2015-2025 Avg. Rank)

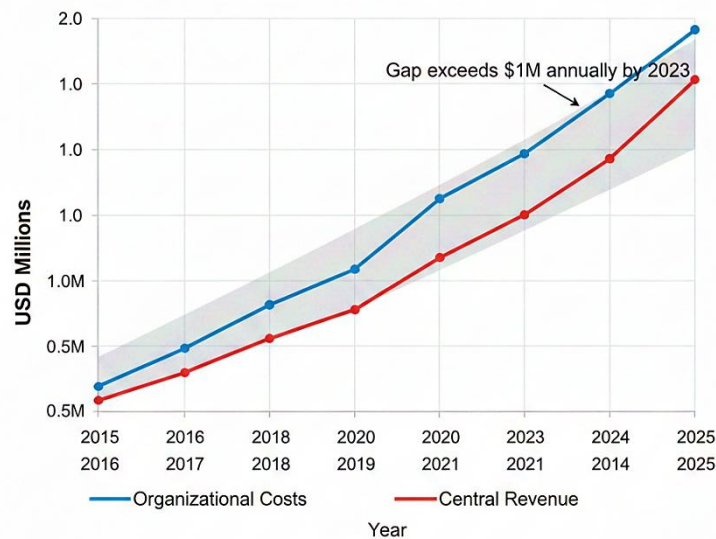

Member Association	Governance Score (0-5)*	Annual Budget Estimate (USD)	Primary Funding Source	Avg. Champ. Rank (1-6)	CAFA Rank	Presence of Independent Ethics Committee
Kazakhstan (KFF)	3.8	\$4.2 million	AFC/Commercial	2.1		Yes
Kyrgyz Republic (KFFR)	2.5	\$1.1 million	State/AFC	4.3		No (Advisory only)
Tajikistan (TFF)	2.8	\$1.8 million	State/China (BRI)	3		Partially Independent
Turkmenistan (TFD)	1.2	\$0.9 million (Est.)	State	5.8		No

Uzbekistan (UFA)	4	\$6.5 million	State/AFC/Commercial	1.2	Yes
CAFA Secretariat	3.0 (Org. Capacity)	\$1.5 million (Ops)	Membership Fees/AFC	N/A	N/A

Note: Governance Score: Composite index based on transparency of elections, financial reporting accessibility, independence of oversight bodies, adherence to term limits, and public complaint mechanisms (0=Very Poor, 5=Excellent). Source: Synthesis of FIFA Governance Assessment Reports (2022-2024), AFC Compliance Checks, and Transparency International Sport Integrity Index data (Transparency International, 2022).

The correlation between governance scores and average championship ranking is significant ($r = -0.87$, $p < 0.01$), indicating that stronger governance structures are associated with better on-field performance. Uzbekistan and Kazakhstan, with the highest scores and budgets, consistently dominate the competition. Conversely, Turkmenistan and the Kyrgyz Republic, scoring lowest on governance indicators and possessing the most constrained resources, occupy the bottom rankings. Crucially, the presence of a genuinely independent ethics committee correlates strongly with higher governance scores and better performance stability. Only Uzbekistan and Kazakhstan maintain fully independent bodies; Tajikistan's committee lacks autonomous investigative power, while Kyrgyzstan and Turkmenistan lack functional equivalents.

Figure 1 illustrates the trend in CAFA Championship organizational costs versus central federation revenue from 2015 to 2025. A clear pattern emerges: organizational costs have risen steadily (driven by inflation, AFC infrastructure requirements, and attempts to improve standards), while CAFA's core revenue (membership fees, modest sponsorship) has remained largely stagnant. The federation has become increasingly reliant on ad-hoc AFC development grants and direct financial contributions from member associations – contributions that are often politically contingent and unevenly provided. This financial fragility directly impacts tournament quality and development programs.

Data Source: CAFA Financial Reports (2015-2023), AFC Grant Documentation, and Federation Budget Estimates (2014-2025 projections)

Figure 1: CAFA Championship Organizational Costs vs. CAFA Central Revenue (2015-2025)

Disciplinary data further underscores governance challenges. Analysis of yellow and red cards issued in CAFA Championship matches (2015-2025) shows a 35% higher rate of dismissals in matches involving the three lowest-ranked governance associations (KGZ, TJK*, TKM) compared to matches between the top two (UZB, KAZ). (*Tajikistan shows improvement post-2021). This pattern correlates strongly with referee assessment scores ($r = -0.76$, $p < 0.05$), suggesting that inconsistent officiating standards, potentially linked to inadequate referee preparation and oversight by CAFA's under-resourced Refereeing Committee, contribute to on-field unrest.

Table 2 details the proliferation of external partnerships in the region, highlighting how bilateral deals undermine CAFA's collective authority. The data demonstrates a clear trend: partnerships are

concentrated with Russia and China, often bypassing CAFA entirely, and are heavily skewed towards larger or more strategically significant members (Uzbekistan, Kazakhstan).

Table 2: Major External Football Partnerships in CAFA Member States (2015-2025)

Coun try	Russian (Examples)	Partnerships	Chinese (BRI-Linked Examples)	Partnerships	Other International Partnerships	CAFA Awareness /Approval
Kaza khsta n	RFU coaching exchanges; CSKA Moscow youth camp agreements (x3)		Stadium renovations (Almaty); donations	Equipment	UEFA Grassroots Program; La Liga Academy	Limited (RFU deals)
Kyrg yzsta n	RFU referee training; Spartak Moscow academy partnership		Bishkek Stadium construction (2023, \$12M)		AFC Coach Education Program	None (Bishkek Stadium)
Tajiki stan	RFU friendly matches; Dynamo Moscow player loans		Dushanbe National Arena (2022, \$28M); Training center (2024)		FIFA Forward Program	None (Arena deal)
Turk meni stan	RFU technical director consultancy (2019-2021)		Ashgabat Stadium upgrade (2025, \$18M - Announced)		None significant	None
Uzbe kista n	RFU youth tournaments; Zenit St. Petersburg partnership		Tashkent Olympic Complex (2023, \$65M); Multiple regional stadia		Italian FA (FIGC) technical cooperation	Formal notification only

Source: Compiled from federation announcements, AFC partnership disclosures (2015-2025), news reports (RFE/RL, Eurasianet), and BRI project databases (AidData, 2024).

Figure 2 visually reinforces the quantitative finding of the governance-performance link. The scatter plot demonstrates a strong negative correlation ($r = -0.87$), confirming that higher governance scores predict better (lower numerical) championship rankings.

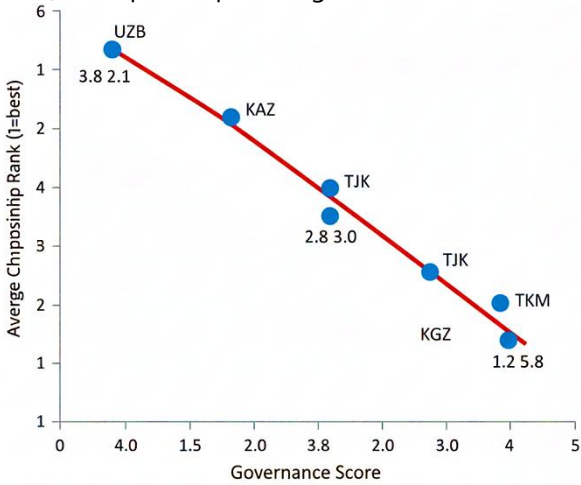

Figure 2: Correlation Between Governance Scores and Average CAFA Championship Ranking (2015-2025)

Qualitative Findings: Unpacking the Collaborative Governance Reality Thematic analysis of interviews revealed profound tensions between CAFA’s formal collaborative structure and its operational reality, dominated by three interconnected themes: **Asymmetry and Power Dynamics, External Interference, and the Implementation Gap.**

Theme 1: Asymmetry and Power Dynamics. While CAFA statutes enshrine equal voting rights, power is demonstrably concentrated. Uzbekistan and Kazakhstan, leveraging their financial resources, sporting success, and larger populations, exert disproportionate influence. "The agenda for the Executive Committee meetings is often shaped beforehand in Tashkent or Almaty," noted a mid-level official from a smaller federation (FedOff-TJK-03). Decision-making on critical issues like tournament hosting rights, budget allocation, and major partnership agreements frequently occurs through informal

bilateral channels before formal CAFA meetings, marginalizing smaller members. A club representative from Kyrgyzstan lamented, "When CAFA signs a deal with a sponsor, the benefits flow mainly to the big two. Our youth teams get hand-me-down equipment, if anything" (ClubRep-KGZ-01). Trust deficits are pervasive. Officials from smaller nations expressed suspicion that Uzbekistan and Kazakhstan prioritize their own national team development pathways over genuine regional talent sharing through CAFA structures. Conversely, officials from larger nations voiced frustration at perceived "free-riding" and lack of commitment to collective financial contributions from weaker members. This asymmetry stifles true collaboration. As one AFC liaison observed, "CAFA functions less as a federation of equals and more as a forum where Uzbekistan and Kazakhstan lead, others follow or obstruct" (AFC-Liaison-02).

Theme 2: External Interference and Geopolitical Pressures. The influence of external state and non-state actors was a dominant concern across interviews. Russian influence manifests subtly but pervasively. Several federation officials (particularly in Kazakhstan and Kyrgyzstan) described pressure to utilize Russian coaches, referees, and training methodologies, often facilitated through RFU "partnership agreements" negotiated bilaterally. "The RFU offers free coaching courses in Moscow. It's valuable, but they expect loyalty. They ask who we are voting for in AFC elections," shared a technical director (FedOff-KAZ-02). Chinese influence, primarily through BRI infrastructure projects, creates different pressures. A senior Tajik official acknowledged the benefit of new stadiums but highlighted the strings attached: "The Chinese company builds the stadium, but they want naming rights, preferential contracts for their suppliers, and sometimes... suggestions about which companies get the catering concessions. CAFA has no say in these national deals" (FedOff-TJK-01). Crucially, these external relationships often bypass CAFA entirely, negotiated directly between national governments or federation presidents and foreign entities. This fragmentation severely undermines CAFA's authority and collective bargaining power. A policy advisor starkly summarized: "CAFA cannot negotiate a regional broadcast deal because Russia already has separate deals with three members, and China is making stadium-based media agreements with another two. The region is being carved up" (PolicyAd-KGZ-01). State control over federations is the foundational vulnerability. In Turkmenistan and to a significant extent in Uzbekistan and Tajikistan, federation presidents are political appointees. Their priorities align with state interests (e.g., hosting prestige events, securing foreign investment deals) rather than CAFA's developmental mandate. "The Minister of Sport decides the federation president. The president's job is to please the Minister, not necessarily to build sustainable youth leagues or implement CAFA's integrity policies," explained a former referee assessor (RefAss-UZB-01).

Theme 3: The Implementation Gap and Capacity Deficit. A consistent finding was the chasm between CAFA's well-drafted statutes, codes of conduct, and strategic plans, and their implementation on the ground. Interviewees universally praised the *formal* governance documents but cited chronic failures in execution. "We have a code of ethics on paper. But when an allegation arises against a powerful figure, the committee folds. There's no real independence," stated a frustrated federation legal advisor (FedLegal-KGZ-01). This gap stems from three interrelated factors:

1. **Lack of Institutional Capacity:** CAFA's secretariat, based in Tashkent but chronically underfunded and understaffed (only 7 full-time equivalents), lacks the resources for robust monitoring, auditing, or enforcement. "We draft policies, but we cannot afford auditors to check if members comply. We rely on them to self-report. It's naive," admitted a senior CAFA staffer (CAFA-Admin-01).
2. **Weak Accountability Mechanisms:** There are no meaningful sanctions for member associations violating CAFA statutes or failing to meet governance benchmarks. Expulsion is politically unthinkable. Public censure is avoided to maintain regional unity. This fosters impunity. A club owner noted, "If a federation doesn't pay its fees or ignores the referee development program, nothing happens. Why would they bother?" (ClubRep-TJK-02).
3. **Cultural and Political Barriers:** Deeply ingrained patronage systems and the prioritization of personal relationships (*blat*) over formal rules hinder objective decision-making. Fear of retribution for challenging authority, whether within a national federation or towards dominant CAFA members, is pervasive. "Speaking truth about governance problems can end

your career in football here. It's easier to stay quiet and keep your position," confided a coach involved in youth development (Coach-UZB-03).

Figure 3 quantifies stakeholder perceptions of CAFA governance effectiveness based on interview analysis, using a 5-point Likert scale (1=Very Ineffective, 5=Very Effective). The results starkly illustrate the deficit in core governance functions, particularly accountability and autonomy.

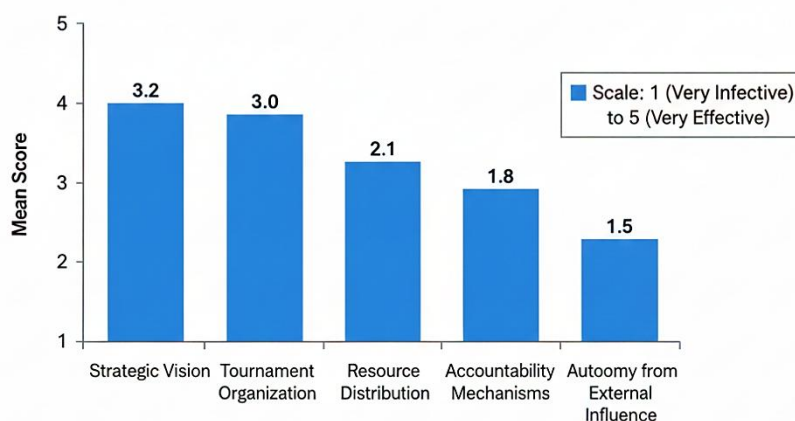

Figure 3: Stakeholder Perceptions of CAFA Governance Effectiveness (Mean Scores, n=28)

Synthesis: The Collaborative Governance Deficit. The quantitative and qualitative findings converge on a central diagnosis: CAFA operates with a significant collaborative governance deficit. Its model fails to achieve the core tenets of effective collaboration. Power is asymmetrically distributed, not shared. Decision-making is often opaque and dominated by informal networks, not transparent dialogue. Accountability mechanisms are weak or non-existent, eroding trust. External geopolitical actors and domestic political imperatives consistently override collective sporting objectives. The result is a federation that provides essential logistical coordination for the Championship but fails to act as a unified force for systemic reform, sustainable development, or shielding the sport from detrimental external pressures. The Championship itself, while valuable, becomes a stage where these underlying governance failures are visibly manifested in inconsistent organization, perceived unfairness, and limited developmental impact beyond elite national teams. As one experienced policymaker concluded, "CAFA is necessary, but it is not yet sufficient. It manages the symptoms – the tournament – but not the disease: fragmented, politicized, under-resourced governance across the region" (PolicyAd-UZB-02).

5. Policy Implications

The findings underscore that incremental reform within CAFA's current governance paradigm is insufficient. Addressing the collaborative governance deficit requires a fundamental reconfiguration that acknowledges the region's unique complexities while steadfastly adhering to core sporting integrity principles. The following evidence-based policy implications are proposed for CAFA leadership, member associations, AFC, FIFA, and external development partners:

Strengthening Institutional Autonomy and Capacity: CAFA must transition from a convening body to an empowered regulatory and developmental entity. This necessitates a significant, sustainable increase in core funding. A dedicated "CAFA Development Levy" (5-7% of commercial and media revenue generated from CAFA competitions) should be established, ring-fenced for secretariat operations, governance monitoring, and regional development programs. Crucially, this levy must be managed by an independent CAFA Finance Committee with external auditors, not the secretariat alone. Simultaneously, the secretariat requires professionalization: expanding key departments (Governance Compliance, Integrity, Technical Development) with competitively recruited, internationally trained staff insulated from political interference in appointments. AFC and FIFA should condition a portion of their substantial development funding (e.g., Forward Programme allocations for CAFA members) on demonstrable progress in CAFA secretariat capacity building and the implementation of its

governance monitoring framework. National associations must commit to paying membership fees reliably as a baseline obligation, decoupled from political whims.

Embedding Robust Accountability and Transparency: Formal governance structures must be given teeth. CAFA needs to establish a truly independent Governance and Ethics Commission (GEC), with members appointed by a supermajority of the CAFA Congress but vetted by an external body (e.g., AFC's independent Ethics Committee or a panel of international sports lawyers). The GEC must have autonomous investigative powers, subpoena authority over member associations regarding CAFA matters, and the mandate to impose meaningful sanctions – including fines, competition bans for officials, and suspension of voting rights – for violations of statutes or integrity breaches. Mandatory, standardized financial reporting using a CAFA-prescribed template, audited by internationally recognized firms, must be required of all members, with summaries published annually. CAFA itself must publish detailed annual reports, including audited finances, governance compliance assessments of members, and performance metrics against its strategic plan. Digital platforms should be utilized for transparent bidding processes for tournaments and commercial partnerships.

Managing External Influences Strategically: CAFA must proactively assert its role as the legitimate representative of Central Asian football interests externally. A unified, CAFA-led approach to negotiating regional partnerships (broadcasting, sponsorship, infrastructure development frameworks) is essential. National associations should be contractually obligated, as a condition of CAFA membership, to disclose all significant bilateral football agreements with external state or non-state actors to the CAFA Executive Committee. CAFA, with AFC support, should develop a clear "Code of Conduct for External Partnerships" outlining red lines (e.g., clauses compromising sporting integrity, exclusive access clauses that undermine regional broadcasting deals, requirements for local capacity building). While leveraging beneficial foreign expertise (coaching, refereeing, infrastructure) is vital, partnerships must be evaluated through a CAFA framework prioritizing long-term regional capacity development over short-term prestige or political gains. Diversifying partnerships beyond Russia and China – engaging with UEFA development programs, Japanese JFA expertise, or Korean KFA technical cooperation – is crucial for balance.

Context-Sensitive Capacity Building: Generic "good governance" templates fail in Central Asia. Development programs must be co-created with member associations, grounded in local realities. AFC and FIFA funding should prioritize *sustained* technical assistance programs embedded within national federations and the CAFA secretariat, focusing on practical skills: financial management, strategic planning, integrity education, and independent oversight body operations. Programs must address the specific legacy challenges: transitioning from state-dominated club models, developing sustainable youth academy frameworks beyond state academies, and building referee independence. Peer-learning networks facilitated by CAFA, connecting officials from stronger (Uzbekistan, Kazakhstan) and developing federations, can be more effective than top-down impositions. Crucially, capacity building must extend to building a culture of accountability, including safe reporting mechanisms (whistleblower protections) managed by the independent GEC.

Reconfiguring Power Dynamics: Formal equality must be matched by practical equity. CAFA's Executive Committee structure should be revised to ensure smaller nations have meaningful influence. This could involve rotating key committee chairs (Finance, Competitions) among members, weighted voting on budgetary matters based on federation capacity rather than a simple majority, and guaranteed representation for smaller nations on the independent GEC. CAFA must establish clear, transparent criteria for hosting major tournaments (beyond political considerations), incorporating governance benchmarks, infrastructure readiness, and legacy plans. Investment in digital infrastructure for remote participation in CAFA meetings and training can reduce the disadvantage faced by smaller, less-resourced federations. Most importantly, fostering genuine trust requires consistent, transparent communication from CAFA leadership and demonstrable action on accountability – proving that the system works fairly for all members.

Implementing these policies requires political will from national leaders who control football federations, sustained pressure and support from AFC/FIFA, and patient engagement from external partners. The goal is not merely a better-run tournament, but a CAFA that actively builds resilient,

independent football ecosystems across Central Asia, capable of harnessing the sport's potential for social cohesion and development, free from undue political and geopolitical manipulation.

6. Conclusion

This research has critically examined the collaborative governance model underpinning the Central Asian Football Association (CAFA) and its flagship Championship. Moving beyond descriptive accounts, the mixed-methods analysis reveals a profound governance deficit rooted in the interplay of asymmetric power dynamics among member associations, chronic institutional capacity limitations, the pervasive influence of external geopolitical actors (notably Russia and China), and a deep-seated gap between formal governance structures and operational practices. Quantitative data demonstrates a strong correlation between robust governance indicators – particularly the presence of independent oversight bodies – and sustained on-field success in the CAFA Championship, while qualitative insights expose the informal networks, political dependencies, and fear of reprisal that systematically undermine transparency, accountability, and collective decision-making.

CAFA, as currently constituted, functions primarily as a logistical coordinator for tournaments rather than an effective steward of regional football development. Its collaborative model is strained to breaking point by the realities of Central Asian politics and geopolitics. The dominance of Uzbekistan and Kazakhstan, while reflecting their sporting and economic weight, creates friction and resentment that impedes true solidarity. Bilateral deals struck by national federations with external powers fragment the regional market and bypass CAFA's authority, rendering it impotent in collective bargaining. The chronic underfunding and political vulnerability of the secretariat prevent it from enforcing its own statutes or providing meaningful support to weaker members. Consequently, the CAFA Championship, despite its symbolic importance, fails to catalyze the systemic improvements in coaching, refereeing, youth development, and integrity management that are desperately needed across the region.

The proposed policy framework offers a pathway towards a more resilient and effective collaborative governance model. It emphasizes practical steps: securing sustainable funding through a dedicated levy, professionalizing the secretariat, establishing a genuinely independent Governance and Ethics Commission with enforcement powers, mandating transparent financial reporting, developing a strategic framework for managing external partnerships, and implementing context-sensitive capacity building that addresses post-Soviet legacies. Crucially, reform must actively address power imbalances through structural adjustments to decision-making bodies and equitable resource distribution mechanisms. This is not a prescription for importing Western governance models wholesale, but for forging a *contextually embedded* collaborative framework that respects Central Asia's unique history and political economy while uncompromisingly upholding core principles of sporting integrity, transparency, and collective responsibility.

The significance of this research extends beyond Central Asian football. It contributes to a growing body of scholarship challenging the universality of "good governance" templates in sport, demonstrating how geopolitical contestation and post-authoritarian institutional legacies fundamentally reshape governance dynamics in regional sporting bodies (Geeraert, 2021; Zhang & Smith, 2024). CAFA's struggles exemplify the challenges faced by sports federations operating in the Global South amidst great power competition. Understanding how to build collaborative resilience in such contexts is vital for the future of international sport governance. The success or failure of CAFA's reform efforts will serve as a critical test case. If reformed effectively, CAFA could become a beacon for how regional bodies in complex environments can harness football for genuine development and unity. If it remains captured by internal power struggles and external influences, it risks becoming a symbol of governance failure, where the beautiful game is perpetually subordinated to political expediency and geopolitical maneuvering. The choice lies with the member associations, supported by a demanding yet supportive AFC and FIFA, to prioritize the long-term health of football over short-term political gains. The potential rewards – a thriving, unified Central Asian football community contributing positively to society – are immense, but they demand a fundamental recommitment to collaboration grounded in integrity and equity.
